

2016L Series

AGENCY FILE NUMBER

E183209

R50119118

Description

The 2016L Series PTC provides surface mount overcurrent protection for low voltage (≤60V) applications where resettable protection is desired.

Features

- RoHS compliant, lead-free and halogen-free
- High voltage • Low-profile
- Fast response to fault
- currents

Applications

- IEEE 1394 port protection
- Powered ethernet port protection (IEEE 802.3 af)
- Automotive electronic control module protection
- Low voltage telecom equipment protection

I $_{\rm hold}$ = Hold current: maximum current device will pass without tripping in 20°C still air.

Caution: Operation beyond the specified rating may result in damage and possible arcing and flame.

- · Users shall independently assess the suitability of these devices for each of their applications
- Operation of these devices beyond the stated maximum ratings could result in damage to the devices and lead to electrical arcing and/or fire
- These devices are intended to protect against the effects of temporary over-current or over-temperature conditions and are not intended to perform as protective devices where such conditions are expected to be repetitive or prolonged in duration
- Exposure to silicon-based oils, solvents, electrolytes, acids, and similar materials can adversely affect the performance of these PPTC devices
- These devices undergo thermal expansion under fault conditions, and thus shall be provided with adequate space and be protected against mechanical stresses
- Circuits with inductance may generate a voltage (L di/dt) above the rated voltage of the PPTC device.

© 2017 Littelfuse, Inc.

Specifications are subject to change without notice.

I trip = Trip current: minimum current at which the device will trip in 20°C still air.

V max = Maximum voltage device can withstand without damage at rated current (I max)

 I_{max} = Maximum fault current device can withstand without damage at rated voltage (V_{max})

P d = Power dissipated from device when in the tripped state at 20°C still air.

R min = Minimum resistance of device in initial (un-soldered) state.

R $_{\rm typ}$ = Typical resistance of device in initial (un-soldered) state.

R _{tmax} = Maximum resistance of device at 20°C measured one hour after tripping or reflow soldering of 260°C for 20 sec.

^{*} Agency Approval is Pending

Average Time Current Curves

The average time current curves and Temperature Rerating curve performance is affected by a number or variables, and these curves provided as guidance only. Customer must verify the performance in their application.

Temperature Rerating Curve

Note:

Typical Temperature rerating curve, refer to table for derating data

Additional Information

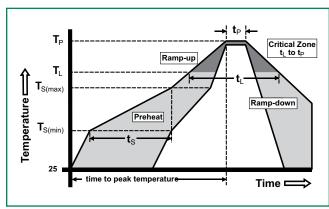

Soldering Parameters

| Profile Feature | Pb-Free Assembly | | | |
|-----------------------|--|-------------------------|--|--|
| Average Ramp-Up | 3°C/second max | | | |
| | Temperature Min (T _{s(min)}) | 150°C | | |
| Pre Heat: | Temperature Max (T _{s(max)}) | 200°C | | |
| | Time (Min to Max) (t _s) | 60 – 180 secs | | |
| Time Maintained | Temperature (T _L) | 217°C | | |
| Above: | Temperature (t _L) | 60 - 150 seconds | | |
| Peak / Classification | on Temperature (T _P) | 260 ^{+0/-5} °C | | |
| Time within 5°C o | 20 - 40 seconds | | | |
| Ramp-down Rate | 6°C/second max | | | |
| Time 25°C to peak | Temperature (T _P) | 8 minutes Max. | | |

- All temperature refer to topside of the package, measured on the package body surface
- If reflow temperature exceeds the recommended profile, devices may not meet the performance requirements
- Recommended reflow methods: IR, vapor phase oven, hot air oven, $\ensuremath{\mathrm{N_2}}$ environment for lead
- Recommended maximum paste thickness is 0.25mm (0.010inch)
- Devices can be cleaned using standard industry methods and solvents
- Devices can be reworked using the standard industry practices

Physical Specifications

| Terminal Materia | Solder-Plated Copper (Solder Material: Matte Tin(Sn)) |
|-------------------|--|
| Lead Solderabilit | Meets EIA Specification RS186-9E, ANSI/ J-STD-002 Category 3. |

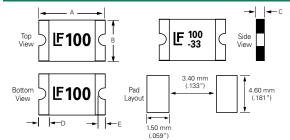

Environmental Specifications

| Operating/Storage Temperature | -40°C to +85°C |
|---|---|
| Maximum Device Surface Temperature in Tripped State | 125°C |
| Passive Aging | +85°C, 1000 hours -/+5% typical resistance change |
| Humidity Aging | +85°C, 85%,R.H.,1000 hours -/+5% typical resistance change |
| Thermal Shock | MIL-STD-202, Method 107 +85°C/-40°C 20 times -30% typical resistance change |
| Solvent Resistance | MIL–STD–202, Method 215 No change |
| Vibration | MIL–STD–883, Method 2007, Condition A No change |
| Moisture Sensitivity Level | Level 1, J-STD-020 |
